

Chinese Electricity Consumption Growth Remains Low

The latest data from the National Energy Administration shows China's electricity consumption grew year-on-year in September by 4.4%. While last month's growth marks a moderate increase from the 3.6% growth seen in August, the first nine months of this year have seen electricity consumption grow year-on-year by only 4.4%. In comparison, during all of last year China's electricity consumption grew year-on-year by 8.5%. This year's low level of electricity consumption growth remains concerning.
